

RASHIKA BINDAL

PRODUCT MANAGER | AI & GENAI PRODUCTS | FINTECH | DIGITAL TRANSFORMATION

Gurugram, India (relocating to Dubai, UAE) | +91-8588089956 | rashika.bindal@gmail.com | [linkedin.com/in/rashika-bindal](https://www.linkedin.com/in/rashika-bindal) | rashikabindal.vercel.app

Nationality: Indian | Immediate joiner | Open to relocation across UAE & GCC

PROFESSIONAL SUMMARY

Product Manager with 6+ years across BFSI, fintech and enterprise SaaS at American Express, Citibank and HSBC, with a proven record of 0 to 1 launches in regulated environments. Currently building an AI-powered consumer discovery and commerce product end to end, from PRD to working prototype, using AI-assisted development. Strong in product discovery, roadmap ownership and data-driven decision making (SQL, Power BI, Tableau), with active research into UAE and GCC fintech and consumer markets ahead of relocating to Dubai.

KEY ACHIEVEMENTS

- **Prevented ~50% of annual production failures** at American Express by identifying an unmet user need through discovery and shipping DLM Gold Simulation, a dry-run capability that also unlocked ~90% execution-time estimation accuracy for the first time.
- **Cut corporate onboarding from 10+ days to under 48 hours** at Citibank by owning a 0 to 1 digital account-opening pilot from discovery and MVP scoping to launch across multiple cities.
- **Delivered ~\$500K revenue impact and 25% adoption growth** by designing the KPI framework, funnel analytics and cross-sell strategy for the product's growth loop.
- **Enabled GenAI at enterprise scale** by treating the migration of 72 data pipelines into LUMI, American Express's cloud-native AI platform serving 15,000+ internal users, as a product problem: prioritised by downstream use-case value, not department order.
- **Built a full-stack consumer AI product 0 to 1:** vision, PRD and a working prototype spanning authentication, media pipeline, AI core and community feed, validated against real user flows.

PROFESSIONAL EXPERIENCE

Product Lead | Independent Consumer AI Product (0 to 1, in stealth), Remote

Apr 2026 to Present

- Owning the full product lifecycle of an AI-powered discovery and commerce product: user research, product vision, PRD, MVP scoping and roadmap for a visual, brand-led consumer category.
- Shipped a working end-to-end prototype (authentication, media pipeline, AI core, community feed) using AI-assisted development (Cursor, Claude), validating every feature against live user flows.
- De-risking the roadmap through rapid discovery, prototype and iterate loops; designed the marketplace incentive model around how users discover, evaluate, decide and re-purchase.

Product Manager, Data & AI | EY (Client: American Express), Gurugram

Sep 2024 to Apr 2026

- Conceived and shipped **DLM Gold Simulation**, a self-serve dry-run capability, after discovery interviews surfaced that failures in a 7 to 9 day compliance cycle only appeared post-execution.
- Delivered ~90% execution-time estimation accuracy for the first time and eliminated the leading source of recurring production failures, turning release scheduling from guesswork into evidence.
- Owned end-to-end discovery and delivery: user interviews, problem framing, PRD and user stories, prioritisation against squad KPIs, and a squad-assisted GTM that drove adoption with zero support-ticket spike.
- Migrated 72 data pipelines into LUMI, American Express's cloud-native AI platform (15,000+ internal users), unlocking GenAI use cases such as real-time personalised offers.
- Cut audit timelines by 30% and manual effort by 35% by aligning 8 to 10 business, engineering and compliance stakeholders on streamlined governance workflows.
- Built an **Enterprise AI Readiness diagnostic framework** assessing banking and financial services institutions across India and the UAE on six dimensions, from data maturity and infrastructure to governance and change readiness; the assessment informed AI roadmap and investment priorities.

Senior Product Analyst | Uptitude (data & analytics advisory), Gurugram

Jan 2024 to Aug 2024

- Reduced financial discrepancies by 20% by defining the product requirements and success metrics for an end-to-end data validation and anomaly-detection capability across business-critical pipelines.
- Influenced client leadership roadmaps by converting exploratory analysis into prioritised, business-case-backed recommendations, resulting in the adoption of 5+ product and process improvement initiatives.

Business Product Analyst | HSBC, Gurugram

Apr 2023 to Sep 2023

- Improved operational efficiency by 15% by translating root-cause diagnostics into an SQL-driven remediation framework, prioritised by business impact.
- Protected release quality by owning UAT end to end: acceptance criteria, test strategy and defect triage across business and technology teams.

Analyst, Data & BI (Product Owner, Suvidha Digital) | Citibank India, Gurugram

Feb 2020 to Feb 2023

- Launched **Suvidha Digital 0 to 1**, a digital salary account-opening product for corporate employees, removing physical document handling (the primary identity-fraud vector) and third-party FATCA outsourcing.
- Cut corporate entity onboarding from 10+ days to under 48 hours via real-time organisation-code lookup, an HR-attested fallback flow and an internally negotiated 48-hour SLA.
- Drove 25% adoption growth and ~\$500K in cross-sell revenue impact by owning KPI strategy and SQL-based customer journey and funnel analytics.

PROJECTS

- **Consumer AI Discovery & Commerce Product (0 to 1, in stealth):** end-to-end ownership from user research and PRD to AI-assisted build and GTM planning; working prototype demoed privately.
- **UAE & GCC Fintech Product Teardowns:** independent product teardowns and market-entry analyses for UAE-focused fintechs in cross-border payments and payroll benefits, covering competitive positioning, regional product gaps and MEA expansion opportunities; shared directly with product leadership.
- **Product case studies** on Suvidha Digital, DLM Gold Simulation and LUMI GenAI enablement, with full problem framing and metrics, published at rashikabindal.vercel.app.

SKILLS

Product Management: Product Strategy & Roadmaps, Product Discovery & User Research, 0 to 1 Launch, MVP Scoping, GTM Strategy, PRDs & User Stories, Backlog Prioritisation, KPI/OKR & North-Star Metric Design, Experimentation & A/B Testing, Funnel & Journey Analytics, Digital Transformation, Stakeholder Management, Cross-Functional Team Leadership, Agile/Scrum, Jira, Confluence, Figma, Notion

AI & Cloud: AI-assisted product development (Cursor, Claude, applied AI models), Next.js, Supabase, Copilot Studio, Power Platform, Azure (Data Factory, Data Lake), AI agent validation

Analytics: SQL (MySQL, SQL Server), Python, Power BI, Tableau, Alteryx, Advanced Excel, Data Modelling

EDUCATION & CERTIFICATIONS

AI Product Management: HelloPM | 2024

Bachelor of Commerce: Maharshi Dayanand University, Rohtak, India | May 2016
